1. Data for Australia, Canada, Mexico, New Zealand and the US relate to the proportion of foreign-born persons in total population

2. Area totals include only countries for which data are shown in this table

a. 1999

b. 1998

c. Former West Germany only

d. Under 14

e. 14-64

f. 1996

g. 1991

h. 1992

j. 1994

k. 1993.

Notes:

Data are OECD estimates

- not applicable

1. Purchasing Power Parities (PPPs) are the rate of currency conversion which eliminates the differences in price levels between countries. They are used to compare the volume of GDP in different countries. PPPs are obtained by evaluating the costs of a basket of goods and services between countries for all components of GDP; PPPs are given in national currency units

per US dollar (in euro per US dollar for euro area countries)

2. Countries still using the System of National Accounts (SNA) 1968.

Notes:

% indicates percent change from the previous year

.. not available

1. According to the International Standard Industrial Classification (ISIC Revision 3), UNO,1990

2. At current prices and current exchange rates, in billion USD

3. Thousands of salaried employees. Thousands of persons engaged for Korea (for ISIC 50-52 and 70-74) Mexico and Switzerland

4. Thousands of enterprises. Thousands of establishments for Canada, Hungary, Ireland, Japan, Korea, Luxembourg (for ISIC 15-37), Norway (for ISIC 15-37) and United Kingdom

5. Excluding ISIC 22, 23, 33 and 37

6. Gross output is valued at factor costs

7. Excluding ISIC 37

a. Excluding ISIC 15 and 16

b. 1998

c. 1997

d. Excluding ISIC 16

e. Excluding ISIC 16, 23 and 30

f. Excluding ISIC 73

g. Excluding ISIC 71.

Notes:

- .. not available
2000. International comparisons should also take into account differences among countries in the length of tax brackets, the amount of tax relief and rates of social security contributions. The highest rate of income tax includes temporary special surcharges. All rates include (average) rates of state and local income taxes as reported in the OECD Tax Database
 2000. This percentage is influenced both by the overall tax level and the relative weight of personal income taxes and employees' social security contributions in national tax mixes
 - One-earner family. Takes account of family allowances and/or tax reliefs

- Unweighted
 - Includes personal and corporate incomes not available separately
 - Includes employees and employers social security contributions not available separately
 - Including self-employment or non-employed
 - Retained profits, includes highest local business tax.

Notes:

- nil
- + growth more than 500%
- 1. These figures are based on an assumption of 100% efficiency for hydro-electric, 33% for nuclear and approximately 10% for geothermal plants; preliminary data
- 2. Million tonnes of oil equivalent
- 3. Total primary energy supply (in Mtoe) divided by GDP (in constant prices; 1995 USD)

- 4. Includes hydro, geothermal, solar, wind, combustible renewables, waste and international trade in electricity.

Notes:

1. CO₂ emissions are calculated using the IEA energy balances, the IPCC Sectoral Approach and the default emission factors from the *Revised 1996 IPCC Guidelines for National Greenhouse Gas Inventories*. They may differ from National Communications submitted by the Parties to the UNFCCC

2. Includes industrial waste and non-renewable municipal waste

3. Excludes international marine and aviation bunkers

4. Kilogrammes of CO₂ per 1995 USD

5. Tonnes of CO₂ per capita.

GDP growth

average annual real change
%, 1991-2001

Ireland recorded the fastest average GDP growth in the OECD area in the last ten years, despite a marked slowdown in 2001. In fact, at 7.7%, it expanded far more quickly than the OECD average growth rate of 2.8%. The United States was the only G7 economy to grow faster than the average; in fact, four G7 countries – France, Italy, Germany and Japan – were among the weakest performers.

Growth slowed in most OECD countries in 2001. The US economy, for instance, recorded a growth rate of 1.2%, compared with 4.2% in 2000. Japan, which saw growth of 2.4% in 2000, saw its economy stagnate in 2001 with a slight fall of 0.4%. Ireland's growth rate nearly halved. The United States remains by far the largest OECD economy, with 36.5% of total OECD GDP, compared with Japan's 12.1% and Germany's 7.9%. The EU accounted for 34.6% of the total.

GDP per capita

OECD=100, using PPPs, 2001

Luxembourg had the highest GDP per head in 2001, at nearly \$50,000, above the US and Ireland, a country where per capita incomes have risen sharply in the last five years. Comparing GDP per capita can be revealing for large changes like this; Japan's slide from the high income group in recent years is another example. But comparisons can be misleading if incomes are clustered in a small range. This is the case for France, Italy and the UK, which have broadly the same GDP per head at about \$25,000. Within the low-middle income group, Spain's GDP per head is now above \$20,000. GDP per head in the four low income countries was less than half the OECD average of \$24,500.

Consumer prices

December 2001/December 2000
% change

Seven OECD countries recorded inflation above 4% in the twelve months to December 2001, compared with nine countries a year earlier. Moreover, consumer price rises appear to have eased in several countries, in particular Australia – where the level eased from nearly 6% in the fourth quarter of 2000 to 3.1% in the same period of 2001 – Mexico, the Netherlands and Poland, where end-year inflation dipped below 4%, compared with over 8% in 2000. Consumer prices rose more sharply in Iceland, from 4.2% to 8.7%. Price pressures were weak in the G7 countries, with the index falling again in Japan.

Forecasts and leading indicators

January 1992 - January 2002

How reliable can economic forecasting be? It depends on several factors, such as the quality of data or models, skill and judgement, etc. One key challenge is anticipating turnarounds as timing can affect policymaking. The OECD's Composite Leading Indicators (CLIs) can help for short-term forecasts (six to nine months forward). By aggregating a range of indicators, the OECD CLI is designed to provide early signals of peaks and troughs in overall economic activity. The total OECD CLI graph anticipates the turning points and, by using a reference series, can be compared with actual economic cycles. The improvement in the regional CLIs from the second half of 2001 signals the possibility of an upturn in economic activity in the Euro area, Japan and the USA in 2002. For more on CLIs, contact www.oecd.org/statistics/

Immigration

inflows of foreigners per 1000 inhabitants,
1995-1999 and 2000

Immigration has risen in most OECD countries since the mid-1990s. The US and Germany received the highest numbers of foreign migrants in 2000, with 850,000 green cards awarded in the former and 650,000 newly registered long-term immigrants in the latter. Japan, the UK, Italy and Canada each absorbed more than 200,000 legal immigrants. Asylum seeking, political refuge and employment all drove recent increases, though Italy's latest rise also reflects a push to regularise the situation of immigrants already in the country. Luxembourg and Switzerland had the most new immigration by population size, while France, Finland, Portugal and Hungary had the least.

Literacy and social background

Average scores of students according to their parents' occupations

The effect of social background on reading ability varies widely across the OECD area. Take Luxembourg. As the dot shows, its 15-year-old students performed below the OECD average in a recent comprehensive study called the PISA survey. Moreover, there was a wide gap in ability between those from less privileged and better-off backgrounds. Germany was another country where poor student performance dragged down the average. Korea had the narrowest gap by social background, with all students performing above the OECD mean. In other words, “quality” and “equity” in school systems need not conflict. For more, see www.oecd.org/education/

Unemployment rates

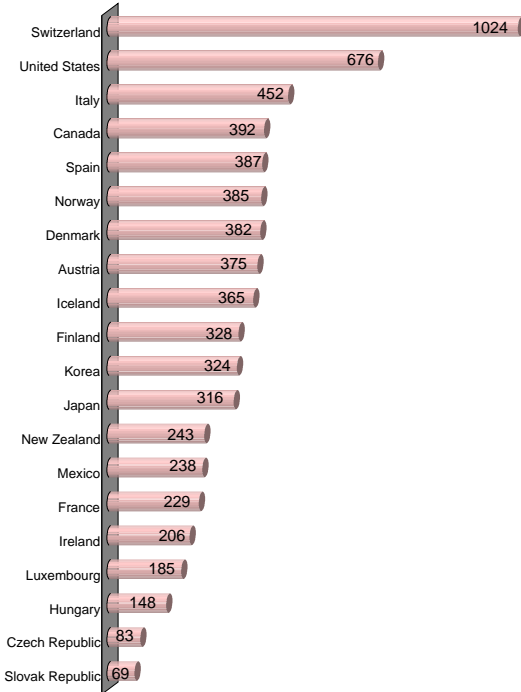

% of civilian labour force, 2000

Joblessness remains higher for women than for men in 19 out of 30 OECD countries. In some countries the difference is marked. In Spain female unemployment was 20.4% in 2000, double the rate for men. Male unemployment exceeded female unemployment most in Hungary and the UK. Unemployment was highest overall in the Slovak Republic and lowest in Luxembourg. G7 joblessness in 2000 was the same as the 1990 level, at 5.8% of the labour force, as increases in Germany and Japan offset declines in the US and the UK.

Personal health spending

per capita "out-of-pocket" spending by households, current \$, PPP, 1999

The Swiss and Americans spend more out their their pockets on healthcare than any other OECD country – \$1,024 per person in Switzerland and \$676 in the United States. This out-of-pocket expenditure comprises cost-sharing, self-medication and other costs paid directly by private households, minus insurance. Both countries also spend more on health in relation to the size of their economies than any other OECD country – 13% of GDP for the US and 10.7% for Switzerland. Yet, the Swiss have about 18 beds and 3.4 doctors for every 1000 people, the US has just 3.6 and 2.8 respectively. Indeed, the US has fewer hospital beds and doctors per inhabitant than France, for instance, where health spending comes to just over 9% of its GDP and net "out-of-pocket" spending to some \$230 per inhabitant.

Ageing populations

Share of youth and elderly population
as % of total population

■ 1960 ■ 2000

■ 1960 ■ 2000

A decline in fertility since the 1970s and a rise in life expectancy has caused OECD societies to age. In other words, the proportion of the youth population has fallen in relation to the total, while older age groups have increased their share. Under 15s now account for just 20% of the OECD area's population, compared with nearly 30% in 1960. At the same time, the proportion of those 65 and over has risen from 8.5% to 13.2%. All OECD countries reflect this trend. Japan is an extreme case. Less than 15% of its population is now under 15, half the 1960 level, whereas 17.3% of its people are aged over 65, up from just 5.7% in 1960. And although Turkey still has one of the OECD's highest youth populations with 30% of the total under 15, this has fallen sharply too.

Privatisation

Total proceeds as % of 2000 current GDP,
1990-2000

Privatisation has been a key part of economic reform in many OECD countries since the 1980s, whether to reduce budget deficits, improve efficiency or, in the European case, achieve budgetary goals in view of monetary union. In the 1990s alone \$1 trillion in state owned enterprises were transferred to the private sector throughout the world, mostly in OECD countries. Cumulative proceeds came to some 3% of OECD area GDP. This ratio varied by country, as the chart shows, with Portugal and Hungary raising proceeds worth a quarter of their GDP. Australia was the OECD's most active privatisers in dollar terms, raising \$11 billion a year on average since 1995 alone; Italy was the most active G7 member, raising some \$110 billion over the entire decade, including \$26 billion in 1999.

Value Added Taxes

Revenue in 1999, as percentage of GDP
%

Personal income tax may be what most people think about first when it comes to taxation, but a shift towards taxes on consumption has taken place in the last 35 years. Now, nearly as much government revenue is raised from value-added taxes (VAT) on sales of goods and services, and more in the case of countries like France, Korea and the Netherlands. This shift is reflected in the rise in the overall OECD tax burden of the last two decades or more, offsetting declines in personal and corporate income tax. VAT in Iceland comes to over 10% of the value of the economy, compared with just 2.5% in Japan. The US is the only OECD country without VAT, preferring instead a state-based sales tax, which comes to about 8% of total US taxes.

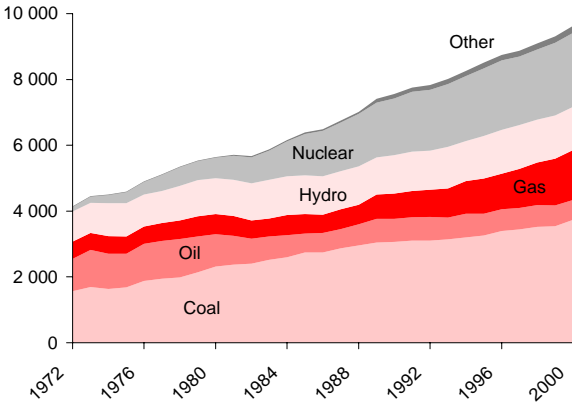

Development aid net ODA, % of GNI, 2001*

*Provisional data

Three decades ago, the UN adopted the Official Development Assistance (ODA) target of 0.7% of aid donor's GNP. By 2001 only five members of the OECD's Development Assistance Committee (DAC), which accounts for the lion's share of global ODA, had reached that goal, with Denmark being alone in exceeding 1%. Three countries - Greece, Italy and the US - dedicated less than 0.2% of their GNI to ODA. The US becomes the world's largest single donor again (disbursing \$10.9 billion), followed by Japan (\$9.7 billion) which had been the largest donor from 1992, then Germany, the UK, France and the Netherlands. The combined total of EU members' ODA was \$26 billion.

Electricity generation by type of fuel for total OECD Twh

Detailed fuel mix for year 2000

Nuclear energy is the OECD area's second most important source of electricity generation, with 23% of the total. That is more than oil and gas combined. This proportion has grown over the years and varies from 82% in France and 79% in Japan to as little as 12.4% in the US or zero in Italy. Coal remains by far the largest single source of fuel for electricity overall. Alternative sources such as wind and solar power are growing in importance, but still account for only 2% of the total. Hydroelectric sources account for just 14% of OECD total electricity generation.

Pollution and growth

% change in total SO_x and NO_x emissions per unit of GDP and per capita between 1990 and 2000

One of the catchwords in sustainable development is decoupling, including how to slow, if not reverse, the growth of environmentally damaging emissions in relation to economic expansion. Some progress has been made, as the chart shows, notably regarding sulphur dioxide emissions that cause acid rain. But the main challenge remains to slow the increase in carbon dioxide emissions, which are considered as the principle cause of climate change. Without new major policy measures, CO_2 emissions will increase by a third by 2020, mainly due to increased transport and energy use. That means worse city air quality and damage to the biosphere that can undermine human welfare.

GENERAL NOTES

All the publications mentioned in the sources may be obtained from the OECD Public Affairs and Communications Directorate in Paris, the OECD Centres in Bonn, Mexico, Tokyo and Washington, or the OECD distributor in your own country.
